SOIL health monitoring and
information systems FOR sustainable
soil management in the
MEDiterranean region

SOIL4MED

Image not found or type unknown

Project Objectives:

The main objective of SOILS4MED is to engage a wide platform of Mediterranean scientists and soil health in the co-design of scientifically sound policy-relevant soil health indicator sets and monitoring strategies harmonized across the MR, with particular focus on non-EU countries, as enabling condition for sustainable soil and water management and for the protection, restoration, and improvement of soil health in the region.

Funding:

European Union

Start / End:

01/05/2023 - 02/05/2024

Budget:

EUR 4.100.000
